

# Lifetime Docks & Hoists

Our aluminum vertical boat lifts are available in 1600#, 2000#, 2500#, 3000#, 4000#, 5000# and 7000#. We have boat lifts available to 60,000#. Unlike other hoist manufacturers, we are able to design and build site specific hoists. Our boat lifts carry a limited lifetime warranty.

## Some important features include:

### *Lifetime Docks Stainless Steel Hardware (nuts & bolts) - Standard*

**Feature:** All of our hardware is of high-grade stainless steel with brass nuts.

**Benefit:** Stainless bolts and brass nuts will never rust — you will never need to replace them.

**Competition:** Competitors offer stainless hardware as an option only — an added cost of \$250 - bolts rust; need replacement.

### *Lifetime Docks Cables are Stainless Steel — Standard*

**Feature:** All of our cables, including the lift cable, are of high quality oversized stainless steel aircraft cable.

**Benefit:** No rusting! Oversized = Very Strong!

**Competition:** Uses galvanized cable (either one or all cables); you will be replacing cables in a few years which is very expensive. Stainless is approximately four times the cost of galvanized cable.

### *Lifetime Docks Pulley & Sheaves — (Nylatron) — Standard*

**Feature:** All Pulleys and sheaves made of *Hi-Tech self-lubricating carbon plastic*.

**Benefit:** Light weight; self-lubricating & self-centering; will never rust or need replacing.

**Competition:** Uses steel or brass; cannot compare; sheaves rust, bind and corrode. Soft brass wears out and needs constant maintenance.

### *Lifetime Docks Handwheel — Standard*

**Features:** Largest in the industry, *48" diameter, solid aluminum*, round stock with large spokes; Hi-tech powder coat green finish.

**Benefit:** Larger wheel increases your mechanical advantage for easier lifting; heavier weight acts as a fly wheel: electrically-applied baked-on powder coat withstands the worst elements including salt water.

**Competition:** Uses lightweight thin wall steel tubing, small spokes; needs repainting frequently, bends, and is very flimsy. The common 40" diameter makes for strenuous cranking which is a common complaint.

### *Lifetime Docks — Magnum Lift Winch (Standard 3000-7000 LB Lifts)*

**Feature:** A heavy duty, over built — Magnum gear reduction lifting winch "The best in the industry". 1/4" stainless steel plate housing, heavy duty chain sprocket drive, larger 5" drum diameter, sealed bearings, self-actuating braking mechanism, 20:1 gear ratio.

**Benefit:** This winch will last forever — it makes lifting your boat much easier than ever before! The oversized cable drum prolongs cable life. This unit is *State of the Art*. **Be certain to check out this winch. You will see the value and it will be a deciding factor in the purchase of your new boat lift.**

**Competition:** Light duty sheet metal housing; poor quality. Small chain sprockets, small lift wheel. Cable breakdown from small 2 1/2" drums. Plastic bushings that quickly wear out. Broken chains and cables. *All of these conditions make lifting your boat very difficult.*

### *Lifetime Docks Articulated Foot Pads — Standard*

**Feature:** Large articulated base pads turned up on both ends

**Benefit:** Contours well to uneven bottom; no stress to aluminum tube; firmer support for your boat lift and boat; the ski-shaped footpad allows for easier movement.

**Competition:** Small, fixed flat pads; will bend and break when not sitting flat on bottom; They are not articulated or turned up on the ends, they dig into bottom when trying to move the lift. **Sharp Edges.**

### *Lifetime Docks Full Length Bunks and Guide-ons — Standard*

**Feature:** Heavy Duty adjustable hardware on our bunks and guide-ons. They will withstand the rough treatment of aligning your boat and supporting its hull. They are also height adjustable.

**Benefit:** Very user friendly, aids in the proper alignment of the boat inside the lift. Guides can be adjusted and used as a step for convenient, easy boarding of the boat. Eliminates damage to the boat.

**Competition:** Light duty, won't hold up; cannot be used as a boarding step; welds typically break, not adjustable or they will use inexpensive VEE chocks providing minimal hull support and poor hull alignment.

4000/5000 lb. Vertical

7000 lb. Vertical

4000 lb. Vertical

3000 lb. Vertical

**As we consistently hear from our customers, "Our dock will be there long after we are gone, and our lift is so easy to operate, we use our boat more often."**
